Object

I am a Web Developer with 3.5 years of experience, seeking to become a senior developer with a deep understanding of the full software lifecycle — from frontend and backend development to business analysis and UI/UX design.

Having grown within a diverse team environment, I've developed strong communication and collaboration skills, working closely with AI, Data, BA, and Automation teams. I've also been involved in multiple projects from the ground up, giving me hands-on experience in technology selection, library evaluation, and system architecture design.

In the long term, I aim to grow into a Team Leader and Product Owner role.

Education

Sep 2020- Jul 2024

Ho Chi Minh University of Technology and Education

- Major: Information Technology
- Specialties: Software Engineering

Skills

Programming Languages: Typescript, JavaScript, Python, C#

Frontend: React, Angular, Next
Tailwind CSS, ShadCN, Ant-Design, MUI, Material Angular

Backend: Nest, .NET, FastApi

Database: MongoDB, PostgreSQL

Tools: Figma, Gitlab, Docker

Experience

Becamex IDC - Frontend Developer & UI/UX - Oct 2023 – Present

Internship Mar 2023 – Sep 2023

- Developed responsive and scalable Frontend and Backend for Smart City - Industrial Park - Factory solutions, Digital transformation including energy, environment, waste water and security using React and Angular.
- Collaborated with BA to design Website UI/UX.
- Support DevOps team to design and optimize deployment.

Projects

Video Analytics System (VMS)

Work project (Sep 2024 - present)

Responsibilities: Full-stack developer, UI/UX

Tech stack: React, MUI, Tailwinds, FastApi

Description:

- Build software to visualize camera operations such as streaming such as recording and detection
- Develop a API server to manage camera, user,... and handling large-scale event data ingestion
- On Frontend, implemented multi-camera streaming visualization with optimized video handling to keep the browser performant

Smart Industrial Park

Work project (Mar 2023 - present)

Responsibilities: Frontend, UI/UX

Tech stack: React, Ant Design

Description:

- Built a multi-app web platform for environment, security, and energy operations across buildings and industrial parks.
- Centralized manual data collection into the cloud and delivered real-time dashboards, enabling operators to manage large areas with less manpower.
- Collaborated with BA and PO teams to design the UI/UX.

Data lake

Work project (Sep 2024 - present)

Responsibilities: Frontend, UI/UX

Tech stack: Angular, Material, TailwindCSS

Description:

- Designed and implemented frontend interfaces for a data lake management system that ingests and visualizes large-scale structured and unstructured data. Key UI features include a data catalog, schema inspection, and pipeline status monitoring.
- Built with Angular, Angular Material, and Tailwind CSS to ensure UI consistency and responsiveness, leveraging Angular's component reusability to accelerate development.

SHE (safe - health - environment)

Work project (Sep 2024 - present)

Responsibilities: Frontend, UI/UX

Tech stack: Angular, Material, TailwindCSS

Description:

- Designed and implemented frontend interfaces for a data lake management system that ingests and visualizes large-scale structured and unstructured data. Key UI features include a data catalog, schema inspection, and pipeline status monitoring.

SHE (safe - health - environment)

Work project (Sep 2025 - Mar 2026)

Responsibilities: Frontend, UI/UX

Tech stack: React, Ant Design

Description:

- Built a web platform for creating, submitting, and approving safety, health, and environmental forms through customizable workflows.
- Developed interfaces for form/ticket creation, multi-step approval processes, and status tracking to streamline SHE-related operations across teams.
- Collaborated with BA and PO teams to design an intuitive UI/UX for both form creators and approvers.
